

Can you guarantee that your contracting companies are compliant?

Are you managing contractor insurances reliably?

How do you know when a contractor becomes non-compliant?

How do your contractors prove they are equipped to perform the tasks required of them?

Are you meeting your WHS obligations?

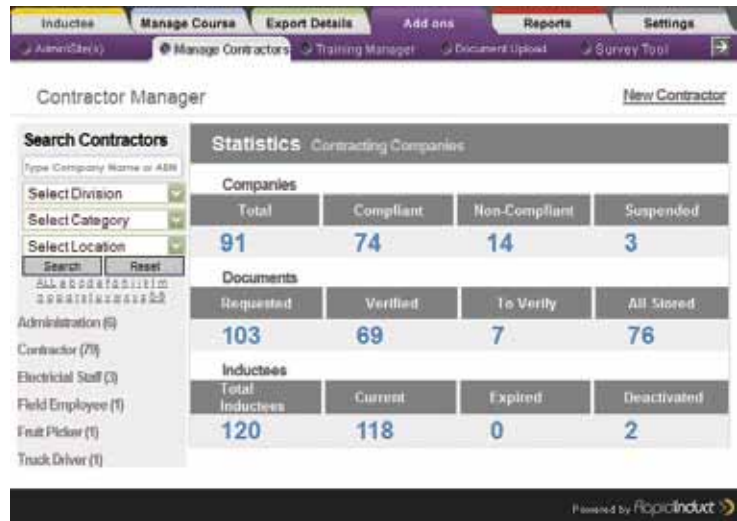

Managing Compliance

Managing compliance for your contracting companies, as well as individual contractors, becomes a streamlined process when you're using Rapid Contractor Management.

This online software application enables you to collect, verify and track all the information you need for each contractor, including:

- Company details
- ABN (through real-time connection to ASIC)
- Appropriate and current insurance cover
- Workcover registration
- Their ability to understand and fulfil their HSE responsibilities

Rapid Contractor Management is not just a prequalification of contractors but a running gatekeeper to ensure your business is on top of its contractor obligations at all times.

Contractor Management Dashboard

Branded Pre-Qualification screens provide a simple process for individual contractors

How it works

ABN Check: Rapid Contractor Management is connected to ASIC in real time and allows your contractor's registered name to be returned when they enter their ABN.

Insurance Check: Contractors can upload their current certificates for your verification, or we can verify them for you. The document verification process allows the expiry date to be entered and tracked so that prior to expiry, your contracting companies will receive an auto-reminder so they can update their information. When used in conjunction with the Rapid Access swipe card system, you can be in full control of site access, always knowing current insurance status.

Workcover Registration Check: Contractors can upload their Workcover registration certificate for each state they work in. If it contains an expiry date, you can enter it to be tracked by the system and receive auto-reminders.

Health Safety and Environment (HSE) Pre-Qualification: This enables you to create a questionnaire for contracting companies in order to determine details on their safety management systems and procedures. It will also allow you to determine what activities they will perform on your site and if they are able to do them safely. The system includes a set of over 30 relevant questions to choose from, or you can enter your own to determine specific information.

For example:

- Do they have an ISO Certificate?
- Do they have a SWMS/JSA?
- What is their Work Safety Management Plan?
- Do they understand their compliance obligations with your environmental sustainability policies?

Rapid Contractor Management can be used to upload and manage any relevant documents that you need to track.

An intuitive user interface makes Rapid Contractor Management simple and effective.

Contractor Manager Dashboard provides instant information and easy management of all contractor documents

Document Request enables you to easily request new and updated documents – and keeps a record of every action!

Automated Email Reminders let contractors know when documents are about to expire
